

Product Inventory and Pricing Report

Dataset Description:

The dataset helps in understanding product performance, pricing strategies, and inventory management while enabling better business analysis and decision-making using Excel tools.

Column Description

COLUMN NAME	DESCRIPTION
Product ID	Unique code assigned to each product record
Product Name	Name of the product
Brand Name	Company or brand associated with the product
Price (\$)	Product price in US dollars
Quantity	Number of units sold or available
Category	Type of product (Electronics, Fashion, Kitchen, Outdoor, etc.)
Price Range	Product classification based on price value
Day	Day of the recorded transaction
Country Code	Country abbreviation where the product data belongs
Month	Month of the transaction or entry

Data Analysis Techniques

1. Sum, Count, and Average	
A. Calculate the total price of all products in the dataset.	
Formula =SUM(D2:D35)	
Total Price of all Product	\$10,100
B. Determine how many products exist in the dataset.	
Formula =COUNT(E2:E35)	
No. of product exist	34
C. Calculate the average price of the products.	
Formula a. =AVERAGE(D2:D35) b.=SUM(D2:D35)/34	
The average price of the products	297.058
	297.058

2. Minimum and Maximum Values

A. Identify the minimum price among all products.

Formula =MIN(D2:D35)

The minimum price among all products

30

B. Identify the maximum price among all products.

Formula =MAX(D2:D35)

The maximum price among all products

1000

3. Logical Function – IF

A. Use the IF function to categorize products based on their price:

1. If Price $\geq$ \$500 → classify as High Price

2 If Price < \$500 → classify as Standard Price

Formula =IF(D2>=\$500,"High Price","Standard Price")

There are 8 high price products in the list

4. Conditional Functions – SUMIF and COUNTIF

A. Use the SUMIF function to calculate the total price of products in the Electronics category.

Formula =SUMIF(F2:F35,"Electronics",D2:D35)

The total price of products in the Electronics category

8050

B. Use the COUNTIF function to determine the number of products with a price less than \$100.

Formula =COUNTIF(D2:D35,">100")

The number of products with a price less than \$100.

22

5. Text Formatting – LEFT, RIGHT, MID
1. Use text functions to extract information from the Product ID column.
Create the following new columns:
A. Create a new column named Day with the first 2 characters of each 'Product ID' using the LEFT function.
Formula =LEFT(A2:A35, 2)
A new column named Day is CREATED
B. Create a new column named Country Code by extracting the last 2 characters from the 'Product ID' column using the RIGHT function.
Formula =RIGHT(A2:A35, 2)
A new column named Country Code is CREATED
C. Create a new column named Month by extracting the 4th to 6th characters from the 'Product ID' column using the MID function.
Formula =MID(D2:D35,4,3)
A new column named Month is CREATED

Conclusion:

This project successfully demonstrates the use of Excel for managing and analyzing global product sales and inventory data.
